

1 - (Executive Overview)

Hana Tech is an international technology holding group with a diverse portfolio of specialized entities registered in the United States and Libya. With strategic offices in Florida, New York, and Benghazi we stand at the intersection of cutting-edge innovation and global security. Our core mission is the democratization of technology and knowledge to ensure that advanced digital development reaches underserved communities in the Global South. As an integrated group, we provide digital infrastructure, strategic software solutions, technical consulting, and training to governments, international NGOs, and private institutions worldwide, contributing to bridging the digital divide through inclusive innovation.

HannaTech Learning Management Platform

Hana Tech LMS Data Sheet

An intelligent learning management system developed in America, operating in "offline—first mode" to bridge the digital divide in underserved areas.

Basic technology

It relies on the "micro learning" mechanism, which raises the rate of comprehension by ٨٠% (according to a study issued by Harvard University).

Curriculum development in accordance with the official \requirements and standards of the State of New York (Empire State Requirements).

Providing companies and banks with advanced skills and building them internally

Preparing organizations for a smooth transition from manual work to automated digital systems

Hana Tech

Amazon digital platform

Amazonat marketplace

- ♦ A digital platform inspired by the Greek Amazons myth, aiming to support the local economy and connect micro–enterprises with government institutions and large companies within Libya through secure trade corridors and smart governance.
- ♦ Entrepreneurs and service providers can showcase and sell their services and products through a smart application after legal and professional verification, with the provision of an integrated corporate system for managing holding companies and government entities, including expense monitoring, inventory management, and revenue tracking for each branch or store.
- ♦ The platform includes AI Vendor Tools that empower users with proactive capabilities, helping product creators generate and craft professional descriptions, digitally enhance and process image quality to suit digital marketing tools, and calculate competitive pricing strategies based on market data.
- ♦ It supports local and global payment gateways such as (Stripe and PayPal).
- ♦ The feature includes tracking and monitoring the carbon footprint and the environmental impact of operations.
